You are allowed to print or export the information to RTF, HTML, PDF, XML, and LaTeX files. GLPK model development tools Aside from the features included in the SciTE editor, the application gives you the possibility to work with several resources specific for GLPK models development. Gusek allows you to verify model/data syntax, solve the current model, and build problems in GLPK LP/MIP, CPLEX LP or MPS format. What's more, you can enable or disable the use of external data files, set the default DAT file, add the actual data file as 'extra data file,' clear the register of 'extra data files,' and turn on or off several options, like output file creation, LP sensitivity analysis, and improved MILP. The program offers you the option to develop models using the default GLPK modelling language and create them using two different modes: single or multiple files. The single file model is suitable for single data set problems, while the latter one can be used for complex models and dynamic data set problems. Gusek offers support for the development of MPS and CPLEX LP models and empowers you to edit data, perform checks, run the files, and

KeyMacro Description: KeyMacro is a software that allows users to automate complex tasks by creating macros that can be automatically repeated with a simple click of a mouse button. KeyMacro can be customized to meet a specific set of requirements by defining a set of commands, variables, and other instructions that are executed in the order in which they are declared in the macro. By using KeyMacro, users can repeat a task or process a large number of times without entering any specific information. Qualtrics Overview Qualtrics is a web-based survey and data collection platform. It allows you to collect and report on user-generated data easily. Its surveys can be directly linked to your database, making them very easy to integrate with your information systems. It includes the following survey types: Automated (offers a quick and accurate way to complete a survey), Single, and Multiple choice (choices in a single question). You can add survey question items easily by choosing the type of question from the drop-down list. You can also assign questions to them as appropriate to their purposes.
