Not as instructed or advertised. Runs poorly on my system. I paid for a trial version but it's buggy and under powered. I don't waste money on unreliable programs. Review: I purchased ClipCache Pro to help me manage and store a variety of different types of data on my PC. I'm not a big fan of manual backup solutions. I have so much content on my system (3 TB) that backing it up is like trying to empty the ocean by using a shaker. Therefore I am always looking for a program that can help me keep an efficient and effective collection of my content. ClipCache is the perfect solution. The interface is intuitive. The storage space is ample. The text editor is very functional and the software is very competent. The software has a learning curve and I found that the software works best after some tweaking of the configuration. Due to the learning curve, I ended up abandoning the program after a few days. The software has a desktop application, a web based management area, and a remote control application. The desktop application sits in the tray and keeps an eye on your clipboard activity. It is very stable
