KEYMACRO: This option specifies what kind of SQLite encryption will be used. Choose one of the following methods: • DBSync for SQLite & MSSQL supports two different SQLite encryption options: o Unencrypted: when the database is empty or contains a simple text-only table. o Encrypted: when the database contains more complex tables, which require encryption. • If the database is encrypted then the data will be encrypted at once by the server before the transfer begins. • If the database is unencrypted then the data will not be encrypted. The data will remain in its original state. Example: Using unencrypted data: ... \t\t\t \t\t\t DROP TABLE IF EXISTS mytable; CREATE TABLE mytable (id INTEGER PRIMARY KEY, a INTEGER, b TEXT, c INTEGER, d INTEGER); INSERT INTO mytable (a, b, c, d) VALUES (10, 'HELLO', NULL, 0); INSERT INTO mytable (a, b, c, d) VALUES (20, 'HI', 'DUMMY', -1); INSERT INTO mytable (a, b, c, d) VALUES (10, 'HI', NULL, 1); INSERT INTO mytable (a, b, c, d) VALUES (20, 'HI', 'DUMMY', 1); DBSync for SQLite & MSSQL will create encrypted or unencrypted tables during migration. For example, it will create a table as follows: CREATE TABLE mytable (id INTEGER PRIMARY KEY, a INTEGER, b TEXT, c INTEGER, d INTEGER); When using an encrypted database, DBSync for SQLite & MSSQL will create the table using the following SQL statement: CREATE TABLE mytable (id INTEGER PRIMARY KEY, a INTEGER, b TEXT, c INTEGER, d INTEGER) ENCRYPTED; When the encrypted database has been created successfully, the following SQL statement is generated: CREATE TABLE mytable (id INTEGER PRIMARY KEY, a INTEGER, b TEXT 2edc1e01e8

DBSync For SQLite And MSSQL

DBSync for SQLite & MSSQL is a comprehensive and easy-to-use database synchronization and migration utility that will allow users to synchronize and convert databases from SQLite to MS SQL or from MS SQL to SQLite rapidly and reliably. Operate with a whole database or select only needed tables, fields, indexes and foreign keys to proceed! Configuring options is done through Wizard interface or in command line mode.
