KEYMACRO is a keystroke macro recorder. It records a keystroke and then plays it back to you. It is a useful tool for anyone who likes to automate their repetitive tasks. Simply, select a task from a list of common functions, then select the task you wish to record a keystroke for, select the location where you want KEYMACRO to record the keystrokes. You then define the keystrokes for that task. Finally, you can select when to play the keystrokes. Record a number of keystrokes at the same time. You can then repeat them later at a later date or time, or replay them to an external program or to your Windows system. Paste the keystrokes in a document, and then copy the document and paste it into a program that expects text (such as Microsoft Word, Excel, etc.). When you are done, copy the keystrokes to the clipboard. Transfer the keystrokes to a program that needs keystrokes, by copying the keystrokes to the clipboard. The macro recorder cannot record complex keystrokes. It requires a fairly simple series of keystrokes to accomplish an operation. Requirements Macros and keystrokes are saved to the memory card. The recording interval (number of keystrokes saved) is controlled by the number of available space on the memory card. The keyboard type and the layout of the keyboard may affect the results of the macro. The most difficult parts of the keystroke to be recorded are the mouse clicks. It is advised that you use a pointing device, such as a touchpad, to record mouse clicks. Some of the macro functions only work on Windows 7 or above. If you want to perform a keyboard macro, please check the compatibility list on this page. KEYMACRO Description: KEYMACRO is a keystroke macro recorder.
