You can control the appearance of the swatch, and the color of the background, by adjusting the RGB value, which is always set to 0,0,0. The color can be changed by dragging the color box around on any color you want. Dragging the box up will bring up a magnifying glass to zoom in on the color, and dragging down will cycle through a color swatch of similar RGB values. The Photo360 feature is a portfolio of your projects. You can load up to 100 projects, make them available to other users, and set a central profile of sorts that can be applied to any combination of projects. You can also download a base project that others remix and then upload back to the service. When you save a project, your profile, and possibly your remixes, appear as a link. You can view the new versions of your project in the iPad using the "adm:portfolio:show" link. The project can also be downloaded in the Aperture- or PSD-based files formats described before. There are three options here: create an Archive, create a Backup, and select just a single page.

- In-app access to the Adobe Libraries.
- Photo-tiling. Elements uses AI technology to detect elements in photos, and automatically applies those details, such as a person, dog, and sky, over the entire image.
- Supports Web standards. Elements 2023 now leverages modern web technologies for compatibility with more devices and browsers.
- returns to CS6's Dreamweaver development tools. Align, a powerful CSS tool for aligning elements on your page, has been restored to Elements. And you can once again use the text tools to edit text—including for indented headlines—and the vector tools.
